### Exercice 1 (2 points)

Soit 
$$A = \begin{pmatrix} -1 & 3 & -1 \\ 3 & -5 & 2 \\ -1 & 2 & -1 \end{pmatrix}$$
. Déterminer la matrice  $A^{-1}$  en prenant soin de vérifier (au brouillon) le résultat final.

$$\begin{pmatrix} -1 & 3 & -1 \\ 3 & -5 & 2 \\ -1 & 2 & -1 \end{pmatrix} \begin{pmatrix} \alpha \\ \gamma \\ z \end{pmatrix} = \begin{pmatrix} a \\ b \\ c \end{pmatrix}$$

### Exercice 2 (4,5 points)

Décomposer en éléments simples dans  $\mathbb{R}(X)$  les fractions rationnelles suivantes :

1. 
$$F(X) = \frac{X^2 + X + 1}{(X + 1)(X - 1)(X - 3)}$$

2. 
$$G(X) = \frac{X^3 - X - 1}{(X+1)(X+3)}$$

$$G(x) = \frac{x^{3}-x-1}{x^{2}-4x+3} = \frac{P}{Q} = \frac{d(P)}{d(P)} > \frac{d(Q)}{d(Q)} >$$

3. 
$$H(X) = \frac{X^2 - X - 1}{(X - 2)(X^2 + 1)}$$

$$H(x) = \frac{x^{2} - x - 1}{(x - 2)(x^{2}, 1)} = \frac{\rho}{Q} d(\rho) < d(Q)$$

$$H(x) = \frac{A}{(x - 2)} + \frac{Bx + C}{(x^{2} + 1)}$$
Calarde A:  $x = 2$ 

$$A = \frac{z^{2} - 2 + 1}{(z^{2} + 1)} = \frac{L - 2 - 1}{2^{2} - 1} = \frac{1}{5}$$
Calarde Bet C:  $x = i$ 

$$Bx + C = \frac{i^{2} - i - 1}{i - 2} = \frac{-i - 2}{i - 2} = \frac{(-2 - i)(-2 - i)}{(-2)^{2} + i^{2}} = \frac{3}{3} = 1$$

$$donc B = 0 \text{ et } C = 1$$

$$H(x) = \frac{1}{S(x - 2)} + \frac{1}{(x^{2} + x^{2})}$$

Soient E un  $\mathbb{R}$ -ev et  $f \in \mathcal{L}(E)$ . On note comme d'habitude  $f^2 = f \circ f$ .

1. Montrer que  $Ker(f) \subset Ker(f^2)$ .

2. Montrer que  $\operatorname{Im}(f^2) \subset \operatorname{Im}(f)$ .

 $Im(f^2) = (y \in E, \exists f(x) \in E, f(x) = y)$   
 $donc f(x)) \in f(x) \in f(x)$   $donc Im(f^2) \subset Imf$ 

3. Montrer que :  $Im(f) \cap Ker(f) = \{0\} \iff Ker(f) = Ker(f^2)$ .
